Virtual Desktop Infrastructure (VDI) Assessment

At Mosaic Technology, our Solution Architects and Engineers can help you evaluate your current physical and virtual network infrastructure to ensure you are fully prepared for upgrades and the transition to Virtual Desktop Infrastructure (VDI).

We bring expert insights on security, interoperability, and design—guiding you through the process of optimizing your network for a seamless VDI implementation. Here are just a few of the ways Mosaic Technology can assist you:

- Help define clear objectives for successfully implementing VDI technology.

- Evaluate your desktop virtualization requirements to ensure the right fit for your organization.

- Assess the potential benefits of virtual desktops for your organization.

- Help identify which employees in your company should be VDI users and assess whether it is the right solution for everyone.

- If needed, evaluate your current virtual environment to assess usage, versions, memory consumption, capacity, and best practices to help plan for your future expansion.

- Assess the readiness of your current applications for virtualization.

- Test your network's speed and identify any congestion or latency caused by misconfigurations.

- Evaluate switching (LAN), routing, both physical and virtual connectivity, and analyze environmental performance metrics.

- Deliver a detailed report of our findings and analysis from the assessment, along with recommended design and configuration changes to ensure a seamless transition to a virtual desktop infrastructure.

Mosaic Technology has helped countless companies optimize their IT environments and smoothly transition to VDI. Our strong partnerships with top industry vendors uniquely position us to evaluate and enhance your IT infrastructure.
